STORM SERIES

ALUMINUM PLIERS WITH TUNGSTEN CARBIDE CUTTERS

Whether you fish the ocean, lakes, rivers or ponds, we have the pliers you need to handle big flies, tough lines, and large fish. For longevity, rinse your pliers in fresh water and apply a little oil.

Designed with 70+ Rockwell hardness tungsten carbide side cutters, these T.C. cutters make short work of any monofilament and excel at cutting the new-age braid and synthetic lines. Can cut wire up to 60lbs. Steel jaws are made from heat treated SUS420 J2 coated stainless steel with a Rockwell hardness of 52. Frame is made from 6061-T6 anodized aluminum to withstand salt water, and is equipped with non-slip rubber grips and a self-opening spring. Comes with coiled bungee lanyard, molded clip-on swivel holster, and replacement cutters, jaws, and hex key.

All pliers have a half smooth and half striated jaw structure.

SPARTAN GUIDE KNIFE

Has everything you need and nothing you don't! Super versatile 5" folding knife with all the attachments you need for a day on the water.

WARNING: Cancer and Reproductive Harm www.P65Warnings.ca.gov.

CAUTION Cut hazard: sharp blade. Contact may result in injury. Handle with care. **Keep out of reach of children**

Features:

- Compact 3.8 oz. frame and non-blade components are crafted from rugged 420J2 Stainless Steel.
- A wicked sharp three inch 8Cr14MoV Teflon® coated high carbon blade makes short work of any cutting situation.
- Pointed shepherds crook for easy hook eye clearing and knot detangling.
- Knot tyer with our patented slider for quick barrel/nail knots and a screwdriver/bottle opener for screwing and/or opening end of day beers.
- Belt clip with a built-in hook file and a separate lanyard attachment keep the knife close at hand.
- Sturdy frame is coated with textured thermoplastic rubber to keep the knife grippy in wet conditions.
- Comes with a Cordura® holster.

BLACK WIDOW SERIES

This wicked cool looking series revolves around the time savings and ergonomics of a bent shaft instrument. The loops on the super sharp razor scissors are raised and exposed, allowing the user to simply put their fingers into the loops without having to slide them across the bench to get them in hand or worse, dropping them on the floor! For those who keep scissors in hand while tying, the bent shaft is more ergonomic than a straight shaft, and follows the contours of your hand. Less hand fatigue=more flies leaving the vise. The bent shaft on the versatile scissor clamps allows for a greater range of motion vs a traditional straight shank or curved jaw clamp. Perfect for excavating flies from a fish's pie hole.

PRISM SERIES

PRISM SCISSORS

3.5", 4" or 4.5"; straight serrated blade

This Big-Three-based series has a titanium nitride coating on the entire scissor. The coating creates a harder blade surface and thus makes these scissors ideal for synthetic materials. The finish is a unique and fantastic swirl of red, green, blue and orange, and no two finishes are ever the same.

XBC SERIES By Dr. Slick

Fish Different!

The radically different XBC series combines form, style and function. Featuring three of Dr. Slick's most popular tools in eight electric powder coated colors. Express yourself and personalize your bench, vest, pack, or bag. Choose from the following vibrant colors:

BLUE, RED, GREEN, YELLOW, PINK, ORANGE, BLACK, and WHITE

XBC MITTEN SCISSOR CLAMPS

5"; straight jaw; half smooth and half cross hatch jaw structure

Easy to Drive

No finger loops here! Simply squeeze the clamp all the way through the ratchets to release. To close, squeeze until the ratchets lock. Extremely popular alternative to the traditional loop and ratchet clamps.

This versatile tool features a serrated scissor mounted behind the jaws for cutting tippet/leader material, trimming flies streamside or opening that pesky bag of jerky. Comes with hook eye cleaning pin in jaw, dual self-opening springs and a full-swivel coiled bungee lanyard. Make it your main squeeze!

XBC SCISSOR CLAMPS

5"; straight jaw; half smooth and half cross hatch jaw structure

The Multi-Tasker

The most versatile clamp we make handles all streamside tasks brilliantly. Features a serrated scissor for cutting tippet/leader material or trimming flies, a hook eye cleaning pin-in-shank, and a straight edge screwdriver for streamside reel and boat repair. Closest item we make to a multi-tool.

XBC NIPPERS

2"; textured rubber grips; super sharp blades; hook eye cleaning pin

Always Hanging Around

One of the most heavily used and critical tools for your vest, pack or bag. Designed for snipping tippet tag ends, clipping off flies, cutting leader material, and cleaning hook eyes. The workhorse of the fishing world.

Metal: 400 Japanese stainless steel.

TWISTED LOOP SERIES

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

TWISTED LOOP SCISSORS U.S. PAT. No. 8272300B2

3.5", 4" or 4.5"; straight serrated blade

This series is truly unique although still based on the Big Three frames. By offsetting one loop and installing a gap between the loops, we have created a more ergonomic scissor with better control and dexterity, while reducing finger fatigue. Excellent with natural materials and can handle most synthetics. Fantastic if you tie with scissors in hand. FYI, your thumb goes in the standard loop.

Made from 410 Japanese stainless steel with a Rockwell hardness of 45.

SlickRelease CLAMPS SERIES

5" Clamp with 5 mm ID tube (best for fly sizes #16-#22) or 6" Clamp with 8mm ID tube (best for fly sizes #8-#18). Gold loop or black finish; curved jaw

Easy, hands-free release of fish finally done right! Simply slide the tube down your tippet until the fly is inside the tube. A quick pop or jiggle and the fly is free from the fish. A huge advantage of this set-up is when a fly is twisted or obstructed from the tube, you can simply use the clamp in the traditional way to remove the hook. Can easily handle all streamside tasks. Match the size and type of flies you use to the release tube size. The OG is back!

Made from 410 Japanese stainless steel with a Rockwell hardness of 45.

THE REST OF THE BEST

SCISSORS

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

DR. SLICK scissors are the choice of fly tyers worldwide. Whether you're new to fly tying or a hardened production tyer, DR. SLICK scissors will maximize your fly tying enjoyment, production and quality.

For maximum performance and longer scissor life, two main rules apply when choosing scissors for tying. First, match the scissor to the types of materials you tie with most often. Most scissors in the DR. SLICK line can handle both natural and synthetic materials with ease, but if you tie predominantly with synthetic materials, consider the new generation of scissors like Tungsten Carbide, Razor and Prism that are designed to handle these materials. Second, match the scissor to the size and type of flies you tie. If you tie small flies without much mass or material, use small finer blade scissors like Arrow, MicroTip and Iris. Conversely, if you tie larger flies, with more mass and material, consider larger scissors with heavier blades like All Purpose, Hair or Razor. Great scissors make great flies!

See Chart on Page 13 for Complete Specifications.

THE BIG THREE

30 years of research and development have proven that the 3.5" Arrow, 4" All Purpose, and 4.5" Hair Scissor frames are the optimum length and blade style for most fly tyers. Whether you tie with scissors in hand or pick up and put down, these scissors make tying easier and more efficient. The Big Three frame styles are also used in the Tungsten Carbide, Micro Tip, Prism, Bent Shaft, and Twisted Loop series.

Arrow: 3.5"; straight or curved serrated blade
Short fine bladed scissor designed for small flies and detail work. The notch at the base of the blades is designed for cutting wire and lead. Excellent for natural materials and can handle most synthetics. Great scissor for in-hand tyers.

All Purpose: 4"; straight or curved serrated blade
The name says it all! Medium length with blades designed for small, medium and large flies. The one to have in your traveling kit. Excellent for natural materials and can handle most synthetics.

Hair: 4.5"; straight or curved serrated blade
Long heavy blades are designed for large flies and tough materials. If you work with hair or other heavy materials, this is a true workhorse. Excellent for natural materials and can handle most synthetics.

SAP4GMT
All Purpose MicroTip Scissor

MICROTIP SCISSORS

3.5"; 4" or 4.5"; straight serrated blade
This series is based on the Big Three, but designed for small delicate detail work. Hypodermic tips on the scissors make short work of very small or lightly dressed flies. Excellent on natural and fine synthetic materials.

SH45TCBL
Tungsten Carbide
Hair Scissor

TUNGSTEN CARBIDE (T.C.) SCISSORS

3.5"; 4" or 4.5"; straight non-serrated blade
Based on the Big Three, this series has T.C. blades welded onto the scissor blade frame. T.C. is 7x harder than stainless steel and holds an edge longer. These can handle all types of tying materials, but were created to tackle modern synthetic materials.

RAZOR SCISSORS

straight serrated blade
Possibly the sharpest scissors ever created. Think razor blades with handles. These thin blades with a razor edge make short work of all materials. Adjustable tension allows for loosening or tightening as materials warrant. Cuts through natural and synthetic materials like butter. Made from 440 grade steel. These are the ultimate tying scissors.

BENT SHAFT SCISSORS

3.5"; 4" or 4.5"; straight serrated blade
This series is based on a simple concept. Picking flat scissors up from a flat surface is no fun, and sliding them across your bench to get them in your hand is a time killer. By placing a bend in the middle of the scissor, the problem of picking up is solved. Handles and performs just like a regular straight scissor. Based on the Big Three scissors. Excellent with natural materials and can handle most synthetics.

IRIS SCISSORS

3.5" or 4"; straight or curved serrated blade
The classic! Most of us started with Iris scissors and they have stood the test of time. Thin blades and hypodermic tips make these ideal for small flies and detail work. Excellent with natural materials and can handle most synthetics.

Each scissor is inspected, adjusted and tested before leaving the Dr. Slick shop, assuring you a tool that won't fail on the bench.

Tipping Scissor

Tightening Scissor

Deburring Scissor

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

drslick.com • 800-462-4474

OPEN LOOP SCISSOR

4"; straight serrated blade
Malleable loops allow you to custom contour the scissor loops to your fingers. Excellent with natural materials and can handle most synthetics.

ST40L

OPEN LOOP THINNING SCISSOR

4"; straight serrated blade
Same malleable loops as above, but with a thinning blade. Ideal for softening hard outlines on flies by cutting alternate lengths and amounts of material. Excellent with natural materials and handles most synthetics.

SPRING SCISSORS

4"; straight or curved serrated blade

The ultimate one-hand wonder! No loops, just squeeze the spring arms together and the blades cut. Great scissor for detail work and in-hand tying. Excellent with natural materials and can handle most synthetics.

FINISHING SCISSOR

5"; straight non-serrated blade

This spring-loaded scissor with finger loop is designed for one-hand operation. Great for in-hand tying and detail work. If you are a rod builder, this is the scissor for you as it can easily cut silk and nylon wrapping thread. Excellent with natural materials and can handle most synthetics.

BRAID SCISSOR

4"; straight non-serrated blade

Great little scissor designed to cut the new age braid and synthetic lines. If you use braid for backing or terminal tackle, this is a must. I use braid to attach stinger hooks to my large streamers...so naturally I have this scissor handy on my bench.

PREPARATION SCISSOR

8.5"; straight serrated blade

This is the big dog in terms of cutting anything you can bring to the tying bench! Very heavy blades with large serrations and a wire cutter for tackling the nastiest stuff in Fly Tying Town. Specifically designed to handle all the heavy new tying materials. Easily handles the macro work on big, thick sheets of foam, heavy leather and yarn for glo bugs, lead, wire, antron, rubber, flash, chenille, latex, tubing, braid, darlon and the list goes on. The mother of all scissors!

SYNTHETICS SCISSOR

5"; straight serrated blade

Designed for cutting heavy natural and synthetic materials. Heavy blades with large serrations for cutting tough stuff like glo bug yarn, foam, leather, plastic, bead chain, lead, wire and mylar. A must for all tying benches.

In more than 20 years of fly tying, these are the best scissors I have ever found.

Steve Rajeff, World Champion Fly Caster

FLY TYING

One of the absolute joys of fly fishing is tying your own flies. Whether you're a novice or a professional, we have the high quality tools to make this art form easier and more enjoyable.

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

BOBBINS

3", 4" or 4.75" Frames

Bobbins are the critical tool in tying since they must keep smooth tension on the thread spool and have super smooth inserts to apply the thread to your fly. To this end, we have created two series of bobbins that handle these tasks with ease. Both have delrin feet for smooth tension on the thread spool, and have either dual glass or ceramic inserts for smooth application of thread to fly. The inserts are shaped to allow for a smoother application of thread or other materials as the bobbin is rotated, and they cause less breakage than traditional pipe or straight edged inserts.

Glass Inserts: A hyper-smooth small diameter insert designed for extra fine tying threads, 8/0 and above, as well as synthetic threads. Ultra slick!

Ceramic Inserts: The gold standard for years. The smooth crystalline substance is extremely slick!

Glass Insert

Ceramic Insert

FLY TYING TOOL MATERIALS

Most of our fly tying tools are available in several finishes. Each finish has its own unique properties and aesthetic to suit your individual taste.

Brass: The classic. Very smooth action, 5 mm diameter handle.

Stainless Steel: Very smooth action, heavier and stronger than brass, 5 mm diameter handle. (400 grade stainless steel)

Bamboo: Very smooth action, lightweight, renewable, large 7 mm diameter handle.

Carbon Fiber: (Jumbo Tools) Very smooth action, lightweight, large 10 mm diameter handle for easier grip and pickup.

All our professional fly tyers demand easy to use, durable and aesthetically pleasing tying tools. We choose DR. SLICK. I still tie over 1000 dozen flies each season and their high quality tools have earned a permanent place on my tying bench.

Craig Matthews, Blue Ribbon Flies, West Yellowstone, MT

HP pliers

HPNS pliers

RHPS pliers

RHPL pliers

HACKLE PLIERS

Non-rotary: 2.25" and **Rotary:** 2", 3.75" Jumbo, or 4"

Non-rotary is best for simple application of hackles to flies. Use rotary when working with parachute flies. A half hitch tool is built into the handle of the rotary pliers.

drslick.com • 800-462-4474

DUBBING TOOLS - *built-in half hitch tool
5" Hooks, 5" Jumbo Hook, 4.5" Jumbo Twister, 4" Turbo Hook, 2" Twister, 6" Comb and Brush, 6" Jumbo Dubbing Brush and 5" Jumbo Dubbing Rake

Used to apply threaded dubbing materials to the body of a fly. DC6 has Velcro comb (light material) and brass brush (heavy material) that create a perfect bead of dubbing when raked through dubbing materials.

WHIP FINISHERS

4", 5" Jumbo, and 6"

Quickest way to finish off your fly and give it a professional appearance. Use 4" or 5" models for small to medium flies or the 6" model for larger flies. Built-in half hitch tool.

BODKINS
5" and 5.75" Jumbo

Used to apply head cement, tease materials on a fly, or execute a half hitch.

BOBBIN THREADERS
5.5" and 7" Jumbo

Used to pull thread through bobbin tube. Built-in half hitch tool.

HALF HITCH TOOLS

3"
Four half hitch openings cover hooks #8-#22. Set of two.

HAIR STACKERS

Small 1.75" (6mm ID), Medium 2" (11mm ID) and Large 2.75" (14mm ID)

Used to stack hair or other materials to even lengths. We have three series of stackers to cover most stackable materials. All stackers feature a neoprene base to protect your tabletop.

Brass

The traditional choice. Smooth action and heavy. Low static build up.

6061-T6 Aluminum

The choice for individuals stacking synthetic or heavy static materials. Smooth action and light. Very low static build up.

400 Grade Stainless Steel

The heavyweight of stackers. Smooth action and very stout. Low static buildup. Best for stacking heavy materials.

400 Grade Stainless Steel with Prism Finish

Titanium nitride coating creates a hard surface for smooth stacking. Each stacker has unique and fantastic swirls of blue, red, green, and orange.

TWEEZERS

Bishop Tweezers

4", straight or curved jaw

Indispensable on the bench for picking up hooks, hackles or beads. Great for holding materials in place when tying a fly.

Large gift set boxes come with slit foam plus extra insert. Substitutions are welcome.

Extra Hand Tweezer

2.25"
Super versatile bull dog, self-closing design. Can be used for a myriad of tasks on the tying bench, but really excels on your vest or in a fly box. I keep one on a retractor and use it to select #20 flies from my midge box and then let it hang while I repack the box. No need to transfer fly to patch. Extra Hand says it all.

Bead Tweezer

4"
Unique arrowhead design allows these self-closing tweezers to grip any size beads or cones. Non-slip rubber pads on the jaws makes it easy to pick up tiny beads and protects against breakage of glass or plastic beads.

Dubbing Loop Tweezer

7.25"
Mammoth tweezers designed to execute perfect dubbing/composite loops. Self closing design keeps materials tight and the inch/centimeter scale on the jaws ensures consistent flies. Smooth flat jaws and textured grip allow for excellent control. Great for picking up hooks, beads and doubles as a bodkin/prison shank. Perfect tool for the avid/production tyer.

CLAMPS

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

Clamps are designed for a myriad of tasks like crushing barbs, removing hooks from fish (or yourself!), opening/closing split shot, knot-tying, cutting tippet, etc. Knowing what tasks you regularly perform stream-side will help you select the clamp(s) that best suit your angling needs. Clamps tend to be a very personal item, and like a favorite rod or reel, people have preferences for their clamps. Some anglers like short clamps and others prefer long. Some like straight jaws while others prefer curved. Many like the gold loops/handles and others prefer the stealth-mode black. So, if you lose your buddy's 5" curved black clamp, don't assume the 4" gold loop straight model you gave him off your vest will clear the air.

See Chart on Page 20 for Complete Specifications.

STANDARD CLAMPS

4", 5", 5.5" and 6" with gold loops or black finish; straight or curved jaw; 5" in prism finish with straight jaw; half smooth and half striated jaw structure

All the most popular sizes from 4" to 6". Designed to handle all your streamside tasks like hook removal, barb crushing, and closing shot.

LONG RANGE CLAMPS

7" and 8"; gold loop or black finish; straight or curved jaw; half smooth and half striated jaw structure

Not for the faint of heart! These clamps are designed to manhandle big flies and keep gnashing teeth and loose treble and fly hooks at a safe distance. Perfectly at home in fresh and salt water. Long heavy duty shanks and short powerful jaws make short work of deep hook removal, big barb crushing, and closing shot. Really handy when removing double fly rigs or stinger setups from fish. Great alternative to traditional pliers.

BARB PLIER

5"; satin with green PVC handles; smooth jaw structure

A crushing beast. The smooth powerful jaws are designed to handle destruction of most hook barbs in fresh and salt water. Comes spring-loaded, with a full-swivel bungee lanyard. I keep one in my vest and another on my tying bench. Easily handles most streamside tasks. Not just for fly anglers, this item is very popular with walleye and bass fisherman for hook removal.

BARB CLAMPS

4.5"; gold loops or black finish; straight jaw; smooth jaw structure

Short with powerful shanks and smooth jaws, this clamp can handle all streamside tasks, but really excels at barb crushing.

SPRING CREEK CLAMPS

5"; gold loops, black or prism finish; straight or curved jaw; smooth jaw structure

One of the favorites of the DR.SLICK crew. Needle nose jaws allow this clamp to be used with #26 midges all the way to #6 buggers. Smooth jaws make crushing barbs on the smallest flies easy.

SPLIT SHOT CLAMP

5"; gold loops or black finish;
straight jaw; smooth jaw structure

Designed to open and close all sizes and materials of split shot. One jaw is shaped like a triangle/wedge and the other jaw has two recesses to hold the shot. Simply place the shot in the recess and close the clamp. The triangular/wedge jaw will open the shot in one smooth motion. A small gap exists between the jaws to ensure no mashing or cutting of tippet. Jaw tips are smooth and can be used for closing the shot. Recessed jaw is colored for ease of use. Built-in straightedge screwdriver helps open damaged split shot. Also handles all streamside tasks making it one of the most innovative crossover clamps we have ever designed.

CSP55B

CLAMP GIFT SETS

Standard or Spring Creek

- SSIG** Nipper, Reel & C5G 5" Gold Clamp in Medium Fly Box
- SSIB** Nipper, Reel & C5B 5" Black Clamp in Medium Fly Box
- SSIPR** Nipper, Reel & C5PR 5" Prism Clamp in Medium Fly Box
- SSICFO** Nipper, Reel & C5CFO 5" Crossfire Standard Clamp in Medium Fly Box
- SPKG** Nipper, Reel & CX5G 5" Gold Spring Creek Clamp in Medium Fly Box
- SPKB** Nipper, Reel & CX5B 5" Black Spring Creek Clamp in Medium Fly Box
- SPKPR** Nipper, Reel & CX5PR 5" Prism Spring Creek Clamp in Medium Fly Box

Gift set boxes come with slit foam inserts and either NSJO nipper/RISOG reel (gold/prism/Crossfire set) or NSJOB nipper/RIS reel (black set)

Substitutions are welcome.

SSIG

MITTEN SCISSOR CLAMPS

4.75" or 5.5"; gold handle, black or prism finish;
straight jaw; half smooth and half cross hatch jaw

Extremely popular alternative to the traditional loop and ratchet clamps. Simply squeeze the clamp all the way through the ratchets to release. To close, squeeze until the ratchets lock. The serrated scissor mounted behind the jaws allows for cutting tippet/leader material, trimming flies streamside or opening that pesky bag of jerky. This one hand wonder comes with hook eye cleaning pin in jaw, dual self-opening springs and a full-swivel bungee lanyard. Also excellent for cold weather fishing where gloves or mittens are the norm, or for tangling with big fish.

drslick.com • 800-462-4474

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

CLAMP FEATURES

Metal

All clamps are made from 410 Japanese stainless steel with a Rockwell hardness of 42.

Curved Jaws

Curved models have a 30 degree angle.

Jaw Structures

Half Smooth & Half Striated

Smooth

Half Smooth & Half Cross Hatch

Pin-In Shank

A feature on most locking clamps, designed for clearing hook eyes and opening small split shot.

Slick Tip

If you're angling in salt water, consider using the black oxidized or prism finished clamps which provide an extra layer of protection. For clamp longevity in salt water, rinse your clamps in fresh water and apply a little oil.

MITTEN SCISSOR CLAMP GIFT SETS

Mitten Scissor Options

- MTKS3G** Nipper, Reel & CMS55G 5.5" Gold Mitten Scissor Clamp in Large Fly Box
- MTKS3B** Nipper, Reel & CMS55B 5.5" Black Mitten Scissor Clamp in Large Fly Box

Gift set boxes come with slit foam plus extra insert, and either NSJO nipper/RISOG reel (gold/prism/Crossfire set) or NSJOB nipper/RIS reel (black set). Substitutions are welcome.

SCISSOR CLAMPS

4", 5.5" and 6.5" with gold loops or black finish; straight or curved jaw; 5.5" in prism finish with straight jaw; half smooth and half cross hatch jaw structure

The most versatile series we make and able to handle all streamside tasks. Serrated scissor for cutting tippet/leader material, trimming flies or performing streamside surgery, no joke...we have dozens of stories (and unfortunately some photos) from angling MD's and non-doctors who have used these clamps to sew up lacerated anglers or remove hooks from every imaginable place on the human body. We also added a straight edge screwdriver for streamside reel and boat repair or in my case re-attaching a license plate. This is the closest item we make to a multi-tool.

BARB CRUSHER SCISSOR CLAMPS

4.75"; gold loops or black finish; straight jaw; smooth jaw structure

Designed to crush barbs and work with small flies. This clamp features a heavy serrated box blade scissor for cutting really stout materials. A smooth-jawed more powerful version of the popular scissor clamps.

SCISSOR CLAMP GIFT SETS

- COMBO-4G** Nipper, Reel & SNH4G 4" Gold Scissor Clamp in Medium Fly Box

REELS & NIPPERS

⚠ **WARNING:** Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

REELS

A must for anglers' vests or packs. These handy retractors keep your gadgets easily accessible.

All reels feature tough steel cords with a 20" draw, except the RPD which features a nylon cord and a 28" draw. Steel cord retractors are best suited for light accessories, like nippers, files and floatant. For heavier items like clamps and fly boxes, use the RPD.

Pin-On Models have a heavy duty pin. **Clip-On models** have the advantage of portability from bag to vest.

Pin-On

Clip-On

TRADITIONAL NIPPERS

One of the most heavily used and critical tools for your vest or bag. Designed for snipping tippet tag ends, clipping off flies, cutting leader material, cleaning hook eyes, sharpening hooks, or tying nail knots, these nippers are the workhorses of the fishing world.

All nippers are 2" and have super sharp blades, an industrial strength hook eye cleaning pin, and a built-in hook file. Knot-tying models have an easy-to-use nail knot tube attached. Metal is 420 J2 Japanese stainless steel.

Nippers

Straight blade face or offset (slanted face). Offset is designed to work in tight to flies and snip tag ends of tippet without cutting hackles or materials.

Knot-tying Nippers

U.S. PAT. No. 7997629

Revolutionary design makes tying the nail knot a cinch. Perfect for attaching backing or leader to your fly line. Don't fear the knot!

KNOT TYER INSTRUCTIONS

ACCESSORIES

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

drslick.com
800-462-4474

NECKLACES

Growing in popularity by the season, these items appeal to the minimalist in all of us. Salt flats fisherman have known their advantages for years, and now many anglers recognize the benefits of dumping the vest. Very popular in the rapidly growing paddle sport market where necklaces are the ticket if you fish from a kayak, paddleboard, canoe, pontoon boat or float tube. If you're tired of carrying 10 lbs of gear in your vest or bag, try a necklace and revel in the freedom.

NECK/TIP

Adjustable elastic shock cord with a padded collar, tippet spool caddy, two RPD retractors, floatant holder, and a waterproof fly box make this item ready to accept your existing tools, fly boxes and gear. Extra features include a 10 lb. break-away safety connector, compression "O" ring clips that allow portability of gear, and shirt clips to keep the necklace from swinging away from you when deep wading or bending over.

NECK/TIP Fully loaded

Same as the Neck/Tip but with all the gear you need to get going now. Includes NSJO Nipper, C5G Clamp, HFG4 Hook File and Bug Jelly floatant.

Slick Tip

The length adjustment loop on the padded collar is a great place to attach a small landing net.

HK

Hat Keeper

17" long with powerful alligator clips. Designed to keep your favorite fishing hat from blowing away by attaching one clip to your hat and the other to your shirt collar or vest.

LS

Leader Straightener

Kinked up leaders and tippet are a nightmare. Pass the offensive tangle through the rubber pads and the kinked up mess goes away. Durable leather construction.

MAGNETIC GEAR HOLDERS

MINIMAG

Tool Keeper

Awesome little magnet with dual carabiners that attaches to your vest or bag. Easily holds clamps, nippers, files, or any tool that needs to be at the ready. Comes with a 10" full-swivel coiled bungee lanyard. Great alternative to standard retractors. Magnet body is only 1-1/4" L x 1/2" D. Not for your car keys!

MAGNETIC WARNING

Contains magnets that can interfere with medical and communication devices.

NETMAG

Net Holder

Fighting with your landing net (or worse losing it) is no fun. This powerful magnetic net holder keeps your net orderly, secure and ready for use. Carabiner attaches to back of vest/necklace or what have you. Can easily hold your net in the up or down position. Extra long full-swivel coiled bungee lanyard keeps your net from walking away while in use. Also works great with pliers.

Nylon cord included to attach magnet to net in hoop-up/handle-down position.

FLY BOXES

BOXL

8.75" L x 4.75" W x 2" D

Large waterproof fly box with slit foam plus extra insert to double capacity.

BOXM

6.3" L x 4" W x 1.8" D

Medium double-sided waterproof fly box with slit foam.

NECK/BOX

4.5" L x 3" W x 1.5" D

Waterproof 6-compartment box with slit foam.

HOLSTER

5" L x 2" W

Black molded rubber, with swivel belt clip and coiled bungee lanyard. Keeps your pliers and clamps within easy reach.

HOOK FILES

Sharp hooks are critical for angling success, and regardless of what you are told, all hooks will need sharpening from time to time. Our two-sided hook files feature dual sharpening grooves for honing hook bottom and point as well as flat areas for side sharpening of points. Hook files are constructed of stainless steel with dual diamond grit surfaces and textured rubber grip. 4" model has a fine side (600 grit pattern) and medium side (300 grit pattern), while the 6" model has medium (300 grit pattern) and heavy (150 Grit pattern).

WARNING: Cancer and Reproductive Harm
www.P65Warnings.ca.gov.

CBL

Clamp Buddy

Losing your clamp is a bummer. These 10" full-swivel coiled bungee lanyards will keep your favorite clamp, or whatever, attached to your vest or bag. Extends to arms length. (2 per pack)

FLOATANT/DESICCANT

also available in tubs of 25

Float

.5 fl oz

A temperature stable silicone floatant. Work a small dab into your flies to keep your bugs high and dry. A must for every dry fly fanatic. Also great as fly line cleaner and accelerator.

Dry Float

1 oz

A unique blend of desiccant and floatant. This product is designed for drying and treating waterlogged and slimed flies in one step. Drop in fly, shake hard, blow off excess, and you're back in the game. Shaker bottle has a leader slit so drowning flies can be treated while still on the tippet. Product is great with CDC and synthetic flies.

SLICK SACK

4.5" x 6"

Velvet drawstring knick knock bags with logo. Tu pac. Perfect for reel spools, tippet, flyboxes, etc.

PROMOTIONAL ITEMS

All the goodies to show you're a DR. SLICK fanatic.
